-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Allowable Subject Matter

1. The indicated allowability of claims 10-12 are withdrawn in view of the newly discovered reference(s) to Morita JP 06233772. Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 10-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Morita.

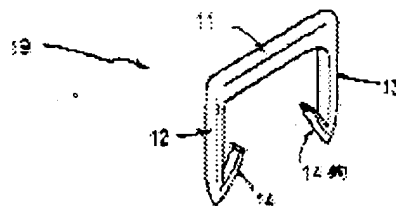

4. Morita teaches a dynamic staple comprising: a staple body including a pair of staple arms operable joined at a shoulder portion by a backspan, each arm further including an elbow portion having an inwardly projecting cleat, the staple arms, the inwardly projecting cleats and the backspan defining an internal tissue capture zone; and each shoulder portion including an interior shoulder angle generally defined by the backspan and the staple arm, the shoulder portion constructed so that the interior shoulder angle is between 70-100 degrees in a first position; and wherein the staple is capable of transitioning between 120-180 degree in a second position when enough force is applied to pull the arms apart. It should be noted that Morita fails to teach that the staple is bioabsorbable. It would have been obvious to one having ordinary skill in

Art Unit: 3731

the art at the time the invention was made to make the staple of a bioabsorbable material, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. *In re Leshin*, 125 USPQ 416. Also it is common knowledge to those of ordinary skill in the art to choose a material that has sufficient strength for the intended use of that material. Therefore, it would have been obvious to one having ordinary skill in the art to use a bioabsorbable material for the staple when being used with a living subject to eliminate removal of the staple. Furthermore, it is well known in the art of surgical staples and clips to use a bioabsorbable staple as evidenced by US Patents 4932960, 4994073, 5089009, 5456400.

5. As to claim 11, Morita teaches the staple of claim 10, wherein each elbow portion includes an interior elbow angle generally defined by the staple arm and the cleat, the elbow portion constructed so that the interior elbow angle is less than 70 degrees and is capable of transitioning to a maximum of 90 degrees when enough force is applied to pull the cleat away from the arm.

6. As to claim 12, Morita teaches the staple of claim 10. The staple is capable having the force applied to transition from one angle to the next at any time including the limitation of not less than 12 hours.
